A STUDY OF PHOTOINDUCED INTERACTIONS OF SOME ACRIDINE DERIVATIVES WITH ORGANIC AMINES AND MACROMOLECULES OF BIOLOGICAL RELEVANCE

THESIS SUBMITTED FOR THE DEGREE OF DOCTOR OF PHILOSOPHY (SCIENCE)
OF JADAVPUR UNIVERSITY

BY BROTATI CHAKRABORTY

CHEMICAL SCIENCES DIVISION
SAHA INSTITUTE OF NUCLEAR PHYSICS
1/AF BIDHANNAGAR
KOLKATA 700064

List of Abbreviations i

Thesis Layout iii

Chapter 1: Prologue 1-64

1.1 Introduction 1

1.2 Acridine derivatives, organic amines and macromolecules of biological relevance — Scope of the thesis 5

1.3 Photoinduced Electron Transfer (PET) and Energy Transfer 9

1.3.1 Photoinduced Electron Transfer 10

1.3.1.1 History of Photoinduced Electron Transfer Reaction 11

1.3.1.2 Energetics 13

1.3.1.3 Theories of Electron Transfer Reactions 15

1.3.1.4 Effect of solvent on electron transfer 24

1.3.1.5 Distance dependence on electron transfer 26

1.3.1.6 Electron transfer in organized systems 28

1.3.1.7 Electron transfer in proteins 29

1.3.1.8 Electron transfer in DNA 33

1.3.2 Resonance Energy Transfer 34

1.4 Magnetic field effect (MFE) on PET reactions 38

1.4.1 Vector spin description of radical ion pairs 40

1.4.2 S-T intersystem crossing and mechanism of magnetic field effect 42

1.4.3 Magnetic field effect on triplet precursors 44

1.4.4 Magnetic field effect on singlet precursors 46

1.5 Host-Guest complex: Supramolecular chemistry 48

References 51

Chapter 2: Materials, Methods & Experimental Techniques 65-75

2.1 Instrumentation 65
Chapter 3: Interaction of Proflavin with aromatic amines in homogeneous and heterogeneous media

3.1 Introduction

3.2 Results and discussion

3.2.1 Fluorescence study in homogeneous media

3.2.2 Fluorescence study in heterogeneous media

3.2.3 Laser Flash photolysis and magnetic field effect

3.2.3.1 Interaction of DMA with PF+

3.2.3.2 Interaction of DMDPM with PF+

3.3 Conclusion

References

Chapter 4: Interaction of Proflavin with an aliphatic amine in homogeneous and heterogeneous media

4.1 Introduction

4.2 Results and discussion

4.2.1 Homogeneous medium

4.2.2 Heterogeneous medium

4.2.3 Laser Flash photolysis and magnetic field effect
4.3 Conclusion

References 105

Chapter 5: Magnetic field effect on photoinduced electron transfer reactions of two acridine derivatives with organic amines in homogeneous medium

5.1 Introduction 106
5.2 Results and discussion 107
5.2.1 AD–organic amine systems 107
5.2.2 AY–organic amine systems 115
5.3 Conclusion 125
References 126

Chapter 6: Interaction of Proflavin and Acridine Yellow with model proteins 127-166

6.1 Introduction 127
6.2 Results and discussion 129
6.2.1 Preliminary studies on drug-protein interaction 129
6.2.1.1 UV-vis absorption spectroscopy 129
6.2.1.2 Fluorescence Spectroscopy 131
6.2.1.3 Effect of SDS 135
6.2.1.4 Laser Flash Photolysis 135
6.2.2 Study using steady-state and time resolved absorption and fluorescence spectroscopies and MFE to explore PET in drug-protein interaction 138
6.2.2.1 UV-vis absorption spectroscopy 138
6.2.2.2 Circular Dichroism Studies 141
6.2.2.3 Fluorescence Spectroscopy 143
6.2.2.4 Laser flash photolysis and magnetic field effect 150
6.2.2.5 Docking Results 157
6.3 Conclusion 164
References 165

7.1 Introduction 167
7.2 Results and discussion \hspace{100pt} 168
  7.2.1 UV–vis absorption \hspace{100pt} 168
  7.2.2 Steady-State and Time-Resolved Fluorescence \hspace{100pt} 169
  7.2.3 Steady-State Fluorescence Anisotropy \hspace{100pt} 173
  7.2.4 $^1$H NMR study \hspace{100pt} 173
  7.2.5 Isothermal Titration Calorimetry \hspace{100pt} 175
  7.3 Conclusion \hspace{100pt} 178
References \hspace{100pt} 179

Chapter 8: Epilogue \hspace{100pt} 180-181
