NUCLEAR STRUCTURE STUDIES
IN THE
VICINITY OF N=82 SHELL CLOSURE

THESIS SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
AT UNIVERSITY OF CALCUTTA

BY
RAJARSHI RAUT
2009
# Contents

Preface. .......................................................... i
Abstract. .......................................................... v
Acknowledgements. ............................................ vii

Chapter 1. Introduction. ...................................... 1
1.1. Single Particle Excitations in Nuclei: the Shell Model. 2
1.2. Collective Model of the Nucleus. ....................... 9
   1.2.1. Nuclear Deformations and Shapes. .................. 9
   1.2.2. Collective Degrees of Freedom in Deformed Nuclei. 12
1.3. The Nilsson Model. ...................................... 16
1.4. Nuclear De-excitations and Spectroscopy. ............. 18
1.5 Theory of Gamma Decay. ................................ 19
1.6. Evolution and Interplay of Particles and Collective Degrees of Freedom. 25

References. ...................................................... 25

Chapter 2. Development of Indian National Gamma Array (INGA) at Variable Energy Cyclotron Center (VECC). 27
2.1. Detectors. .................................................. 29
   2.1.1. Interaction of Gamma Radiation with Matter. 30
   2.1.2. Solid State Detectors in Gamma Spectroscopy. 34
   2.1.3. Spectrum, Background and Compton Suppression. 39
   2.1.4. The Clover Detector. .................................. 41
   2.1.5. Characterization of a Clover Detector. ........... 47
   2.1.6. Detector Arrays in Contemporary Gamma Spectroscopy. 49
   2.1.7. Detector Geometry of INGA at VECC. ............... 52
2.2. Elements of INGA Beamline at VECC. ................ 55
2.3. Pulse Processing Electronics at INGA, VECC.  

2.4. CAMAC based Data Acquisition System at INGA, VECC: Multi-crating and Crate Synchronization.  

2.5. Data Reduction and Analysis.  

2.5.1. List Mode Data Formats.  
2.5.2. Calibration and Gain Matching.  
2.5.3. Addback.  
2.5.4. Construction of Two Dimensional Histogram (Matrix).  
2.5.5. Construction of Three Dimensional Histogram (Cube).  
2.5.6. Assignments of Spins of the Excited States.  
2.5.7. Assignments of Parity of the Excited States.  
2.5.8. Incorporation of the Efficiency Correction in Data Analysis.  

References.  

Chapter 3. Spectroscopy of $^{143,144}$Sm.  

3.2. Earlier Experiments on $^{143}$Sm.  

3.3. Experimental Details and Data Analysis.  

3.3.1. Choice of Target-Projectile Combination: Statistical Model Calculations.  
3.3.2. Barrier and Kinematic Calculations.  
3.3.3. Estimation of Target and Backing Thickness.  
3.3.4. Data Analysis.  

3.4. Results on $^{143}$Sm.  

3.4.1. Level Scheme of $^{143}$Sm.  
3.4.2. Theoretical Interpretation of the Level Scheme of $^{143}$Sm.  

3.5. Lifetime Measurement of Dipole Band in $^{143}$Sm.
### 3.5. INGA at IUAC
- INGA at IUAC.  
- Details of the Experiment and Data Analysis.  
- The Doppler Shift attenuation Method (DSAM).  
- Results of DSAM Analysis in $^{143}\text{Sm}$.  

<table>

### Chapter 4. Spectroscopy of $^{155}\text{Tm}$
- Structural Characteristics of Rare Earth Transitional Region.  
- Earlier Works on $^{155}\text{Tm}$.  
- Experimental Details.  
  - Gamma Detector Array (GDA) at IUAC, New Delhi.  
- Data Analysis.  
- Results.  
- Discussions.  
- Particle Rotor Model Calculations in $^{155,157,159}\text{Tm}$.  
  - The Particle Rotor Model (PRM).  
  - Choice of Parameters for PRM Calculations.  
  - Results of PRM Calculations.  
- Summary.  
- References.
