Contents

List of Figures **xvii**

List of Tables **xxi**

Preface **xxiii**

Notations **xxvii**

1 Scope of particle physics **1**
1.1 What are elementary particles? . . . 1
1.2 Inventory of elementary fermions . . . 2
1.3 Which properties? . . . 4
1.4 Fundamental interactions . . . 6
1.5 High energy physics . . . 8
1.6 Relativity and quantum theory . . . 10
1.7 Natural units . . . 12
1.8 Plan of the book . . . 14

2 Relativistic kinematics **16**
2.1 Lorentz transformation equations . . . 16
2.2 Vectors and tensors on spacetime . . . 19
2.3 Velocity, momentum and energy . . . 22
2.4 Covariance . . . 23
2.5 Invariances and conservation laws . . . 24
2.6 Kinematics of decays . . . 25
2.6.1 Lifetime and time dilation . . . 25
2.6.2 Two-body decays . . . 26
2.6.3 Three-body decays . . . 28
2.7 Kinematics of scattering processes . . . 31
2.7.1 Center-of-mass frame . . . 31
2.7.2 Fixed-target frame . . . 32

3 Symmetries and groups **35**
3.1 The role of symmetries . . . 35
3.2 Group theory . . . 35
3.3 Examples and classification . . . 37
3.3.1 Examples . . . 37
3.3.2 Classifications . . . 40
3.4 Generators . . . 42
3.4.1 Parameters and generators . . . 42
3.4.2 Algebra . . . 44
3.5 Representations . . . 45
3.5.1 Matrix and differential representations . . . 45
3.5.2 Irreducible representations . . . 48

3.5.3 Kronecker product of representations . . . 49
3.5.4 Decomposition under a subgroup . . . 51
3.6 Lorentz group . . . 52
3.6.1 Generators and algebra . . . 52
3.6.2 Representations . . . 54
3.6.3 Extended Lorentz group and its representations . . . 56
3.7 Poincaré group . . . 59

4 A brisk tour of quantum field theory 61
4.1 Motivating quantum fields . . . 61
4.2 Plane wave solutions . . . 63
4.2.1 Scalar fields . . . 63
4.2.2 Vector fields . . . 65
4.2.3 Dirac fields . . . 69
4.3 Lagrangian . . . 73
4.4 Making Lorentz invariants with fields . . . 75
4.4.1 Invariants with scalar and vector fields . . . 75
4.4.2 Invariants involving Dirac fields . . . 75
4.4.3 Final recipe . . . 80
4.5 Lagrangians for free fields . . . 80
4.6 Noether currents and charges . . . 82
4.7 Quantum fields as operators . . . 84
4.8 States . . . 86
4.9 Interactions . . . 87
4.10 From Lagrangian to Feynman rules . . . 90
4.10.1 External lines . . . 90
4.10.2 Internal lines . . . 91
4.10.3 Vertices . . . 93
4.10.4 Other factors . . . 93
4.10.5 Feynman amplitude . . . 94
4.11 Calculation of decay rates . . . 95
4.11.1 General formula . . . 95
4.11.2 Two-body decays . . . 96
4.11.3 Three-body decays . . . 97
4.12 Calculation of cross-sections . . . 99
4.12.1 General formula . . . 99
4.12.2 Illustrative example . . . 100
4.12.3 Mandelstam variables . . . 104
4.13 Differential decay rates and cross-sections . . . 105
4.13.1 Angular distribution in the CM frame . . . 105
4.13.2 Invariant form of angular distribution . . . 107
4.13.3 Angular distribution in FT frame . . . 108
4.13.4 Other differentials . . . 109
4.14 Feynman diagrams that do not represent physical amplitudes . . . 110

5 Quantum electrodynamics 112
5.1 Gauge invariance . . . 112
5.1.1 Global phase symmetry . . . 112
5.1.2 Local symmetry . . . 113
5.1.3 Charge conservation . . . 114
5.2 Interaction vertex . . . 116
5.3 Elastic scattering at second order . . . 119
5.3.1 Electron–electron scattering . . . 119
5.3.2 Electron–positron scattering . . . 124
5.3.3 Compton scattering . . . 126
5.4 Inelastic scattering at second order . . . 130
5.4.1 Pair creation and pair annihilation . . . 130

5.4.2 Muon pair production . . . 131
5.5 Scalar QED . . . 135
5.6 Multi-photon states . . . 136
5.6.1 Generalities . . . 136
5.6.2 Two-photon states . . . 137
5.6.3 Three-photon states . . . 138
5.7 Higher-order effects . . . 138
5.7.1 Electromagnetic form factors . . . 138
5.7.2 Form factors in non-relativistic limit . . . 141
5.7.3 Vertex function at one-loop . . . 145
5.7.4 Anomalous magnetic moment . . . 148

6 Parity and charge conjugation 150
6.1 Discrete symmetries in classical electrodynamics . . . 150
6.2 Parity transformation of fields . . . 151
6.2.1 Parity invariance of a Lagrangian . . . 151
6.2.2 Free scalar fields . . . 152
6.2.3 Free photon field . . . 153
6.2.4 Free fermion fields . . . 154
6.2.5 Interacting fields . . . 155
6.3 Charge conjugation . . . 158
6.3.1 Nature of the transformation . . . 158
6.3.2 Free bosonic fields . . . 159
6.3.3 Free fermion fields . . . 160
6.3.4 Interacting fields . . . 162
6.4 Parity properties of particle states . . . 164
6.4.1 Intrinsic parity for bosons . . . 164
6.4.2 Intrinsic parity for fermions and antifermions . . . 165
6.4.3 Orbital parity . . . 167
6.5 Charge conjugation properties of particle states . . . 169
6.6 Multi-photon states . . . 170
6.7 Positronium . . . 170
6.8 Parity assignment of different particles . . . 175
6.9 Signature of parity violation . . . 177
6.9.1 Correlations in experiments . . . 177
6.9.2 Parity violating transitions . . . 180
6.9.3 Parity violating coupling with external fields . . . 181
6.9.4 Connection with field theory . . . 182
6.10 Consequences of charge conjugation symmetry . . . 184
6.11 CP symmetry . . . 185

7 Time-reversal and CPT symmetries 188
7.1 Anti-unitary operators . . . 188
7.1.1 Definition . . . 188
7.1.2 Rules for working with operators . . . 189
7.2 Time reversal transformation on fields . . . 191
7.2.1 Free fields . . . 191
7.2.2 Interactions . . . 193
7.3 CPT transformation on fields . . . 194
7.4 CPT theorem . . . 195
7.5 Consequences of CPT symmetry . . . 196
7.6 Time reversal transformation on states . . . 198
7.7 Signature of time reversal violation . . . 199

8 Isospin 201
8.1 Nuclear energy levels . . . 201
8.2 Isospin symmetry . . . 202

8.2.1 Group structure of isospin transformations . . . 202
8.2.2 Isospin representations . . . 203
8.3 Pions . . . 205
8.4 Isospin relations . . . 207
8.4.1 Forbidden processes . . . 207
8.4.2 Relative strengths . . . 208
8.4.3 Smushkevich's method . . . 210
8.5 G-parity . . . 211
8.6 Generalized Pauli principle . . . 214
8.7 Isospin and quarks . . . 219
8.7.1 Nucleons . . . 219
8.7.2 Pions . . . 220
8.7.3 More hadrons . . . 222
8.8 Pion–nucleon interaction . . . 223
8.9 Isospin breaking . . . 224
8.10 Baryon number . . . 225

9 Discovering particles 228
9.1 Discoveries of electron, proton and neutron . . . 228
9.2 New particles in cosmic rays . . . 230
9.3 Accelerators . . . 231
9.4 Detectors . . . 235
9.5 Hadronic zoo . . . 238
9.6 Detecting short-lived particles . . . 241
9.6.1 Resonances . . . 242
9.6.2 Reconstruction of events . . . 245
9.7 Discovering leptons . . . 246
9.8 Overview of particle physics experiments . . . 249
9.8.1 Non-accelerator experiments . . . 249
9.8.2 Accelerator experiments . . . 250

10 SU(3) quark model 254
10.1 Strange quark . . . 254
10.2 Hypercharge . . . 255
10.2.1 Hypercharge and charge of hadrons . . . 255
10.2.2 Hypercharge and isospin . . . 256
10.3 SU(3) . . . 257
10.3.1 Some general properties of SU(N) groups . . . 258
10.3.2 Fundamental representation . . . 258
10.3.3 Conjugate representation . . . 260
10.3.4 Examples of other representations . . . 261
10.3.5 Young tableaux . . . 263
10.3.6 Decompositions in a subgroup . . . 267
10.4 Mesons from three flavors of quarks . . . 270
10.5 Baryons from three flavors of quarks . . . 273
10.6 U-spin and V-spin . . . 275
10.7 SU(3) breaking and mass relations . . . 277
10.8 Electromagnetic properties in SU(3) . . . 282
10.8.1 Fundamental interaction . . . 282
10.8.2 Baryon magnetic moments . . . 283
10.8.3 Electromagnetic mass differences . . . 288
10.9 Decays of hadrons . . . 289
10.9.1 Decays of members of pseudoscalar meson octet . . . 289
10.9.2 Decays of members of baryon octet . . . 291
10.9.3 Decays of members of baryon decuplet . . . 292
10.9.4 Decays of members of vector meson nonet . . . 292
10.10 Summary of conservation laws . . . 293

10.11 Color . . . 294
10.11.1 Symmetry of baryon states . . . 294
10.11.2 Generalized Pauli principle . . . 296

11 Non-abelian gauge theories . . . 298
11.1 Local SU(N) invariance . . . 298
11.2 Gauge fields . . . 301
11.2.1 Transformation properties of gauge fields . . . 301
11.2.2 Field-strength tensor . . . 303
11.2.3 Pure gauge Lagrangian . . . 304
11.2.4 Mathematical interlude . . . 306
11.2.5 Free gauge Lagrangian . . . 310
11.3 Self-interaction of gauge bosons . . . 311
11.3.1 Quartic vertices of gauge bosons . . . 311
11.3.2 Cubic vertices of gauge bosons . . . 312
11.4 Fadeev–Popov ghosts . . . 313
11.5 Interaction of gauge bosons with other particles . . . 315

12 Quantum chromodynamics . . . 318
12.1 SU(3) of color . . . 318
12.2 Running parameters . . . 322
12.2.1 Why parameters run . . . 322
12.2.2 Running of QED coupling . . . 327
12.2.3 Beta function . . . 330
12.2.4 Running of the QCD coupling . . . 333
12.3 QCD Lagrangian . . . 335
12.4 Perturbative QCD . . . 336
12.4.1 Cross-sections involving quarks and gluons . . . 337
12.4.2 Jet production . . . 344
12.5 The $1/N$ expansion . . . 348
12.6 Lattice gauge theory . . . 352
12.6.1 Scope and basics . . . 352
12.6.2 Path integral . . . 354
12.6.3 Quantum field theory on Euclidean spacetime . . . 356
12.6.4 Quarks and gluons on a lattice . . . 360
12.6.5 Lattice action . . . 361
12.6.6 Fermion doubling problem . . . 364
12.6.7 Path integral on a lattice . . . 367
12.6.8 Correlation functions and physical observables . . . 368
12.6.9 Continuum limit . . . 369
12.7 Confinement . . . 371
12.8 Asymptotic properties of color gauge fields . . . 375
12.8.1 Dual of field-strength tensor . . . 375
12.8.2 Topological invariants . . . 379
12.8.3 QCD vacuum . . . 381

13 Structure of hadrons . . . 385
13.1 Electron–proton elastic scattering . . . 385
13.2 Deep inelastic scattering . . . 389
13.3 Structure functions and charge distribution . . . 393
13.4 Scaling . . . 394
13.5 Partons . . . 396
13.6 Parton distribution functions . . . 399
13.7 Parton distribution and cross-section . . . 402
13.8 Fragmentation . . . 404
13.9 Scale dependence of parton distribution . . . 405
13.10 Quark masses . . . 407

13.11 Glueballs . . . 409

14 Fermi theory of weak interactions . . . 410
14.1 Four-fermion interaction . . . 410
14.2 Helicity and chirality . . . 413
14.2.1 Helicity . . . 413
14.2.2 Chirality . . . 416
14.2.3 Connection . . . 417
14.2.4 Neutrino helicity . . . 418
14.2.5 Weyl fermions . . . 419
14.3 Fierz transformations . . . 420
14.3.1 Scalar combinations . . . 421
14.3.2 Pseudoscalar combinations . . . 423
14.3.3 Invariant combinations with fields . . . 424
14.4 Elastic neutrino–electron scattering . . . 426
14.5 Inelastic neutrino–electron scattering . . . 429
14.6 Muon and tau decay . . . 430
14.7 Parity violation . . . 434
14.8 Problems with Fermi theory . . . 438
14.9 Intermediate vector bosons . . . 440

15 Spontaneous symmetry breaking . . . 443
15.1 Examples of spontaneous symmetry breaking . . . 443
15.1.1 Breaking a Z_2 symmetry . . . 443
15.1.2 Breaking a U(1) symmetry . . . 446
15.1.3 Breaking a non-abelian symmetry . . . 448
15.2 Goldstone theorem . . . 449
15.3 Interaction of Goldstone bosons . . . 451
15.4 Higgs mechanism . . . 454
15.4.1 Gauge boson mass . . . 454
15.4.2 Gauge fixing . . . 455
15.4.3 Unitary gauge . . . 457
15.4.4 Renormalizablity . . . 458

16 Standard electroweak model with leptons . . . 459
16.1 Chiral fermions and internal symmetries . . . 459
16.2 Leptons and the gauge group . . . 460
16.3 Symmetry breaking . . . 462
16.3.1 Gauge bosons and their masses . . . 462
16.3.2 Couplings of photon . . . 466
16.3.3 Gauge fixing . . . 467
16.4 Gauge interaction of fermions . . . 468
16.5 Yukawa sector . . . 471
16.6 Connection with Fermi theory . . . 473
16.6.1 Charged-current induced processes . . . 473
16.6.2 Neutral-current induced processes . . . 475
16.6.3 Processes induced by both types of currents . . . 476
16.7 Forward-backward asymmetry . . . 478

17 Electroweak interaction of hadrons . . . 482
17.1 Quarks in standard model . . . 482
17.2 Gauge interaction of quarks . . . 485
17.3 CKM matrix and its parametrization . . . 487
17.4 Yukawa interaction of quarks . . . 489
17.5 Leptonic decays of mesons . . . 492
17.5.1 Decay of charged pions . . . 493
17.5.2 Decay of charged kaons . . . 496

17.5.3 Related processes . . . 497
17.6 Spin and parity of hadronic currents . . . 498
17.7 Selection rules for charged currents . . . 502
17.8 Semileptonic decays of mesons . . . 503
17.9 Neutral kaons . . . 504
17.9.1 Eigenstates in the neutral kaon sector . . . 504
17.9.2 Decays of neutral kaons into pions . . . 508
17.9.3 Kaon oscillations . . . 509
17.9.4 K_L^0-K_S^0 mass difference . . . 510
17.9.5 Leptonic decays of neutral kaons . . . 517
17.10 Processes involving baryons . . . 519

18 Global symmetries of standard model 523
18.1 Accidental symmetries . . . 523
18.2 Approximate symmetries . . . 527
18.3 Chiral symmetries . . . 528
18.3.1 Symmetries of massless Dirac Lagrangian . . . 528
18.3.2 Sigma model . . . 530
18.3.3 Currents and charges . . . 532
18.3.4 Chiral symmetry breaking . . . 535
18.3.5 PCAC and soft pion theorem . . . 536
18.3.6 Quark masses . . . 539
18.3.7 Chiral Lagrangians . . . 542
18.4 Anomalies . . . 544
18.4.1 Failure of Noether's theorem . . . 544
18.4.2 QCD anomaly of $\mathrm{U(1)_A}$ . . . 551
18.4.3 Decay of neutral pions . . . 552
18.4.4 Anomaly cancellation for gauge currents . . . 555
18.4.5 Non-anomalous global symmetry . . . 557

19 Bosons of standard model 558
19.1 Interactions among bosons . . . 558
19.1.1 Self-interaction among gauge bosons . . . 558
19.1.2 Self-interaction among scalars . . . 562
19.1.3 Gauge-scalar interactions . . . 563
19.2 Decay of gauge bosons . . . 565
19.3 Scattering of gauge bosons . . . 568
19.4 Equivalence theorem . . . 570
19.5 Custodial symmetry . . . 573
19.6 Loop corrections . . . 575
19.6.1 Oblique parameters . . . 576
19.6.2 Evaluation of T . . . 579
19.7 Higgs boson . . . 583
19.7.1 Elusiveness . . . 583
19.7.2 Theoretical bounds on mass . . . 584
19.7.3 Production . . . 588
19.7.4 Decay . . . 589

20 Hadrons involving heavy quark flavors 593
20.1 Charm quark and charmed hadrons . . . 593
20.1.1 Prediction of charm quark . . . 593
20.1.2 Discovery of charmonium . . . 594
20.1.3 Flavor SU(4) . . . 597
20.1.4 Discovery of other charm-containing hadrons . . . 602
20.1.5 Decay of mesons with charm quark . . . 603
20.1.6 Decay of baryons with charm quark . . . 606
20.2 Bottom quark . . . 606

20.2.1 Discovery of bottom-containing hadrons . . . 607
20.2.2 Decay of bottom-containing hadrons . . . 607
20.3 Neutral meson–antimeson systems . . . 608
20.4 Top quark . . . 610
20.5 Quark masses . . . 612
20.6 Heavy quark effective theory . . . 613
20.6.1 Symmetries . . . 613
20.6.2 Hadron fields . . . 615
20.6.3 Consequences . . . 617

21 CP violation 620
21.1 CP violation and complex parameters . . . 620
21.2 Kobayashi–Maskawa theory of CP violation . . . 621
21.3 Rephasing invariant formulation . . . 623
21.4 CP-violating decays of kaons . . . 625
21.4.1 Observables and experimental results . . . 625
21.4.2 Identifying sources of CP violation . . . 626
21.4.3 CP violation in semileptonic decays . . . 628
21.4.4 CP violation in decays into two pions . . . 629
21.4.5 Standard model estimates . . . 640
21.5 Other signals of CP violation . . . 646
21.5.1 Decays of mesons involving heavier quarks . . . 646
21.5.2 CP-violating correlations . . . 651
21.5.3 Electric dipole moment . . . 651
21.6 Unitarity triangle . . . 653
21.7 CP violation and T violation . . . 655
21.8 Strong CP problem . . . 657
21.8.1 Effective θ-parameter . . . 657
21.8.2 Physical effects of θ . . . 659
21.8.3 Can θ be irrelevant? . . . 660

22 Neutrino mass and lepton mixing 663
22.1 Simple extension of standard model . . . 663
22.2 Neutrino oscillation . . . 665
22.2.1 Theoretical analysis . . . 665
22.2.2 Experimental data . . . 669
22.2.3 Matter effects . . . 673
22.2.4 Summary . . . 677
22.3 Majorana fermions . . . 680
22.3.1 Definition . . . 680
22.3.2 Feynman rules . . . 682
22.4 Consequences of lepton mixing . . . 685
22.4.1 Lepton flavor violation . . . 685
22.4.2 CP violation in leptonic sector . . . 689
22.5 Lepton number violation . . . 691
22.5.1 Neutrinoless double beta decay . . . 691
22.5.2 Lepton to antilepton conversion . . . 694
22.6 Models of neutrino mass . . . 694
22.6.1 Adding singlet neutrinos . . . 694
22.6.2 Effective Lagrangian for neutrino mass . . . 697

23 Beyond the standard model 700
23.1 Shortcomings of standard model . . . 700
23.2 Left–right symmetric model . . . 702
23.3 Grand unified theories . . . 704
23.4 Horizontal symmetry . . . 709
23.5 Supersymmetry . . . 711

23.6 Higher dimensional theories . . . 712
23.7 String theory . . . 714

Appendix A Units and constants **717**

Appendix B Short summary of particle properties **719**

Appendix C Timeline of major advances in particle physics **724**

Appendix D Properties of spacetime **727**
D.1 Metric tensor . . . 727
D.2 Levi-Civita symbol . . . 728
D.2.1 Contraction properties . . . 729
D.2.2 Transformation properties . . . 729
D.2.3 Spatial antisymmetric tensor . . . 731

Appendix E Clebsch–Gordan co-efficients **732**

Appendix F Dirac matrices and spinors **735**
F.1 Dirac matrices . . . 735
F.1.1 Basic properties . . . 735
F.1.2 Associated matrices . . . 737
F.1.3 Contraction formulas . . . 738
F.1.4 Trace formulas . . . 738
F.1.5 Strings of Dirac matrices . . . 741
F.1.6 A property of the matrix $\mathbb{C}$ . . . 742
F.2 Dirac spinors . . . 743
F.2.1 Plane wave solutions of Dirac equation . . . 743
F.2.2 Normalization of spinors . . . 745
F.2.3 Conjugation properties . . . 745
F.2.4 Result of γ_0 multiplying the spinors . . . 746
F.2.5 Result of γ_5 multiplying the spinors . . . 747
F.2.6 Spin sums . . . 749
F.2.7 Projection matrices on spinors . . . 749
F.3 Bilinears . . . 752
F.3.1 Gordon identity . . . 752
F.3.2 Squaring amplitudes . . . 753
F.3.3 Non-relativistic reduction . . . 754

Appendix G Evaluation of loop integrals **756**
G.1 Introducing Feynman parameters . . . 756
G.2 Reduction to invariant integrals . . . 758
G.3 Wick rotation . . . 759
G.4 Angular integration . . . 761
G.5 Integration over the magnitude . . . 761
G.6 Divergent integrals . . . 762

Appendix H Feynman rules for standard model **766**
H.1 External lines . . . 766
H.2 Propagators . . . 766
H.3 Vertices . . . 767
H.3.1 Vertices in gauge sector . . . 767
H.3.2 Gauge bosons and Higgs bosons . . . 769
H.3.3 Scalar self-interactions . . . 770
H.3.4 Vertices involving fermions . . . 770

Appendix I Books and other reviews **772**

Appendix J Answers to selected exercises **775**

Index **777**

List of Figures

2.1 Kinematically allowed region in a three-body decay 30
2.2 Two-particle scattering in the CM frame 32
2.3 Two-particle scattering in the FT frame 33

4.1 Interactions in diagrammatic form 88
4.2 Two-particle elastic scattering from ϕ^3 interaction 89
4.3 Two-particle elastic scattering from ϕ^4 interaction 100
4.4 More diagrams for elastic scattering of scalar particles 110
4.5 4-point and 2-point functions 111

5.1 Creation and annihilation of particles at the basic QED vertex 117
5.2 Feynman rule for the QED vertex. 118
5.3 Diagram for electron–electron scattering 120
5.4 Diagrams for electron–positron scattering 125
5.5 Diagrams for Compton scattering 127
5.6 Diagram for muon–antimuon production 132
5.7 Feynman rules for scalar QED vertices. 135
5.8 Effective vertex between a fermion and the photon 139
5.9 One-loop correction to the vertex function in QED. 146
5.10 More one-loop corrections to the vertex function in QED. 148

6.1 Furry's theorem says that such a vertex is impossible 185

8.1 Low-lying states of the nuclei ^{7}Li and ^{7}Be 202
8.2 Basic vertices in the Yukawa theory. 206
8.3 States of the dineutron, the deuteron and the diproton 215

9.1 Discovery of the positron 231
9.2 The basic idea of a cyclotron. 232
9.3 Schematic diagram of a linear accelerator. 233
9.4 Detector surrounding the beam pipe 236
9.5 Parts of a modern detector 237
9.6 Bubble chamber tracks 239
9.7 Cross-section near resonance 244

10.1 Isospin and hypercharge of $J^P = 0^-$ mesons 256
10.2 Isospin and hypercharge of $J^P = 1^-$ mesons. 257
10.3 Pictorial meaning of Eq. (10.35) 265
10.4 Young tableaux of the conjugate of a representation 267
10.5 Isospin and hypercharge of quarks. 271
10.6 The $J^P = \frac{1}{2}^+$ baryon octet 274
10.7 The $J^P = \frac{3}{2}^+$ baryon decuplet 275

11.1 Feynman rule for quartic interactions of gauge bosons 312
11.2 Feynman rule for cubic interactions of gauge bosons. 313

11.3 Feynman rules involving ghosts. . . . 314
11.4 Gauge boson vertex with fermions. . . . 316
11.5 Gauge boson vertices with scalars. . . . 317

12.1 Strong interaction between two baryons 320
12.2 Pion exchange as an effective picture 321
12.3 Diagrams for the two-point function 325
12.4 Virtual electron–positron pairs around a bare electron 329
12.5 Self-energy of gauge bosons 331
12.6 Extra diagram for $q\mathrm{g} \to q\mathrm{g}$ scattering 341
12.7 Gluon–gluon elastic scattering 342
12.8 Schematic diagram for two-jet production 344
12.9 Jets 345
12.10 Basic Feynman diagram responsible for three-jet events 346
12.11 The double-line notation 349
12.12 A non-planar diagram 350
12.13 Two-point function and decay diagram for mesons 351
12.14 Pictorial representations of basic links and plaquettes 360
12.15 Going towards the continuum limit on the lattice 371
12.16 Magnetic lines of force in a superconductor 372
12.17 First non-zero term for $\langle W(R,T)\rangle$ 374

13.1 Diagram for electron–proton elastic scattering 386
13.2 Electron–proton inelastic scattering 390
13.3 Ocean quarks and gluons 401
13.4 Parton distribution functions for the proton 408

14.1 Helicity of decay-products of a spinless particle 415
14.2 Differential cross-section for neutrino–electron scattering 428
14.3 Electron energy spectrum in muon decay. . . . 433
14.4 Intermediate vector boson for weak interactions 441

15.1 Shape of the potential 444
15.2 Shape of the potential of a complex scalar field. . . . 447
15.3 Diagrams for decay of H into two Goldstone bosons 453
15.4 Scattering of a Goldstone boson and another scalar particle. . . . 454

16.1 Propagators in R_ξ gauge 468
16.2 Feynman rules for fermion interactions with W and Z bosons 469
16.3 Feynman rules for fermion interactions with scalar fields 472
16.4 Muon decay 473
16.5 Elastic ν_μ-e scattering 475
16.6 Elastic ν_e-e scattering 477
16.7 Diagram for muon–antimuon production 478

17.1 Diagrams for fermion–fermion scattering 489
17.2 Fermion interactions with unphysical scalars 491
17.3 Fermion interaction with the Higgs boson 492
17.4 Quark-level Feynman diagram for charged pion decay 493
17.5 K^0-$\widehat{K}^0$ transition diagrams 510
17.6 K^0-$\widehat{K}^0$ box diagrams involving unphysical Higgs bosons 513
17.7 More diagrams for K^0-$\widehat{K}^0$ transition 517
17.8 K_L^0 decay to $\mu^+\mu^-$ 518
17.9 Neutrino–quark scattering 520
17.10 ν-p and $\widehat{\nu}$-p scattering cross-section 521

18.1 Triangle diagrams 546

19.1 Feynman rule for cubic interactions of gauge bosons. . . . 559

19.2 Feynman rules for quartic interactions of gauge bosons. 560
19.3 Feynman rules for cubic interactions of scalars 563
19.4 Vertices involving two gauge bosons and one scalar boson 565
19.5 Diagrams for W^+W^- elastic scattering 568
19.6 One-loop correction to fermion–fermion scattering 576
19.7 Self-energy diagram for gauge bosons 580
19.8 Higgs boson production at hadron colliders 588
19.9 Higgs boson decay to two photons 590
19.10 Branching ratios for Higgs boson decay 591

20.1 The ratio R 596
20.2 Mesons in SU(4) 598
20.3 Spin-½ baryons in SU(4) 600
20.4 Spin-3/2 baryons in SU(4) 602
20.5 Explanation of the OZI rule 604
20.6 One-loop diagrams for $b \to s + \gamma$ 608

21.1 Quark-level tree diagrams contributing to $K^0 \to 2\pi$ 641
21.2 Gluonic corrections to tree diagrams contributing to $K^0 \to 2\pi$ 641
21.3 Penguin diagrams 643
21.4 Diagrams for photon coupling to quarks 652
21.5 Unitarity triangle 653
21.6 Schematic diagram for test of T violation 656

22.1 Contours of equal oscillation probability 668
22.2 KamLAND result 672
22.3 Summary of solutions of neutrino oscillation experiments 678
22.4 Neutrino mass hierarchies 679
22.5 One-loop diagram for the process $\mu \to e + \gamma$ 685
22.6 One-loop diagram for the process $\mu \to 3e$ 688
22.7 More diagrams for $\mu \to 3e$ involving Majorana neutrinos 690
22.8 Quark-level diagram of $\beta\beta_{0\nu}$ process 692
22.9 Different versions of the seesaw mechanism 698

23.1 Baryon number violation 707

G.1 Contour for performing k_0 integration. 760

List of Tables

1.1 Elementary fermions 4
1.2 Elementary bosons. 7
1.3 Dimensions of important kinematic quantities in natural units. 13

4.1 Feynman rules for external lines. 91

6.1 Electromagnetic quantities under parity and time reversal 157
6.2 Kinematical variables under parity and time reversal 178

10.1 Magnetic moments of baryons in the octet 285

14.1 Feynman rules for external lines related to a left-chiral Weyl field. 420

21.1 Time-dependent CP-violating effects in B meson decays 651
21.2 Taggings required for tests of different discrete symmetries 657

22.1 Feynman rules for external Majorana fermion lines 683

23.1 Counting parameters of the standard model. 700

A.1 Conversion factors in natural units 717
A.2 Physical constants. 718

B.1 Properties of fundamental bosons 719
B.2 Properties of leptons 720
B.3 Properties of various baryons 720
B.4 Properties of various mesons 721
B.5 Properties of quarks 723

E.1 Clebsch–Gordan co-efficients for $\frac{1}{2} \times \frac{1}{2}$ 733
E.2 Clebsch–Gordan co-efficients for $1 \times \frac{1}{2}$ 733
E.3 Clebsch–Gordan co-efficients for 1×1 734
