

STUDIES ON THE ROTATIONAL SPECTRA OF MOLECULES  
USING MICROWAVE AND RADIO FREQUENCY-MICROWAVE  
DOUBLE RESONANCE SPECTROSCOPY

DISSERTATION SUBMITTED FOR THE DEGREE OF  
DOCTOR OF PHILOSOPHY ( SCIENCE )  
OF THE  
UNIVERSITY OF CALCUTTA

*Alokmay Datta*

SAHA INSTITUTE OF NUCLEAR PHYSICS  
CALCUTTA

*APRIL, 1987*

List of Publications

## Chapter 1. The Basic Theory of Microwave Spectroscopy

1.1. Introduction

1.2. The Molecule as a Rigid Rotor

1.3. The Rigid Symmetric top molecule

1.4. The Rigid Asymmetric top molecule

1.4.1. Qualitative Survey

1.4.2. Energy-levels of a rigid asymmetric rotor

1.4.3. Symmetry classification of asymmetric top wave functions

1.4.4. Selection Rules and Intensities

1.5. Centrifugal distortions in a molecule

## 1.6. Derivation of the Structures of Molecules from Microwave Spectroscopy

### 1.6.1. Some General Remarks

### 1.6.2. Relation between molecular dimensions and moments of inertia

### 1.6.3. Kraitchman's Equations for isotopic substitutions

### 1.6.4. Single-substitution in a Planar Asymmetric Top

### 1.6.5. Determination of Molecular Structures : Two Approaches

### 1.6.6. The Vibrationless State : Equilibrium Structure and Effective Structure

### 1.6.7. Substitution Structures : An Outline

### 1.6.8. The Inertia Defect

## 1.7. The Least-Squares Analysis

### 1.7.1. An Outline of the Technique

### 1.7.2. How to use the Technique

## 1.8. References

## Chapter 2. The Double Resonance Phenomenon

### 2.1. Introduction

### 2.2. The Double Resonance Phenomenon in general

### 2.3. Population distributions in presence of radiation and dominant line-broadening mechanisms

#### 2.3.1. Doppler Broadening

#### 2.3.2. The two-level system in presence of collisional broadening

2.4. Three-level Radio Frequency-Microwave Double Resonance (RFMDR)

2.5. Off-resonant conditions

2.6. Application in spectral assignment

Appendices

A. Schrodinger Equations for the three-level system

B. The value of  $a_2(t-t_0)$  in three-level system for one-photon transition

C. Calculating the Integrals

2.7. References

### **Chapter 3. Stark and Double Resonance Modulated Microwave Spectrometers**

3.1. Introduction

3.2. The Stark Modulated Spectrometer

3.2.1. Basic Principle

3.2.2. The Spectrometer

3.2.3. Microwave Sources

3.2.4. Absorption Cell

3.2.5. Detection System

3.2.6. Frequency Measurement

3.2.7. The Set-up

### 3.3. Radio Frequency-Microwave Double Resonance Modulated Spectrometer

#### 3.3.1. Double Resonance Modulation

#### 3.3.2. The Set-up

#### 3.3.3. A Performance Check of the Spectrometer

#### 3.3.4. Intensity and Power Considerations

### 3.4. Sensitivity

### 3.5. Resolution

### 3.6. Accuracy of Frequency Measurement

### 3.7. References

## Chapter 4. Microwave Spectral Study of 2-fluorophenol : Cis Conformer

### 4.1. Conformations and Conformers

### 4.2. Conformers and Microwave Spectroscopy

### 4.3. Conformations in Halophenols

### 4.4. Microwave Spectral Study of 2-fluorophenol

#### 4.4.1. Introduction

#### 4.4.2. Experimental Details

#### 4.4.3. Assignments and Results

#### 4.4.4. Molecular Structure

### 4.5. References

## Chapter 5. Microwave Spectral Studies of 3-fluoro- and 2-fluorobenzonitrile

### 5.1. Introduction

### 5.2. Microwave Spectral Study of 3-fluorobenzonitrile

#### 5.2.1. Experimental Details

#### 5.2.2. Observed Spectrum and Assignment

#### 5.2.3. Molecular Structure

### 5.3. Microwave Spectral Study of 2-fluorobenzonitrile

#### 5.3.1. Experimental Details

#### 5.3.2. Observed Spectrum and Assignment

#### 5.3.3. Molecular Structure

### 5.4. A Comment on these Investigations

### 5.5. References
