

**CRYSTALLOGRAPHIC STUDIES OF A FEW  
BIOLOGICALLY IMPORTANT PROTEINS**

THESIS SUBMITTED FOR THE DEGREE OF  
DOCTOR OF PHILOSOPHY (SCIENCE)  
OF  
JADAVPUR UNIVERSITY

BY  
PIYALI GUHA THAKURTA  
CRYSTALLOGRAPHY AND MOLECULAR BIOLOGY DIVISION  
SAHA INSTITUTE OF NUCLEAR PHYSICS  
1/AF, BIDHAN NAGAR

# CONTENTS

PREFACE	
LIST OF ABBREVIATIONS	i-iv
	v

## PART I

Chapter 1: An Introduction to the Papain Family of Cysteine Proteases		
1.1	Proteases	1
1.2	Cysteine proteases	3
1.2.1	Catalytic mechanism of cysteine proteases	3
1.3	Classification of cysteine proteases	5
1.4	The papain family	5
1.5	Substrate specificity of the papain family of cysteine proteases	14
1.5.1	S1 binding site	14
1.5.2	S2 binding site	17
1.5.3	S3 binding site and beyond	18
1.5.4	S1' binding site	19
1.5.5	S2' binding site	21
1.6	Inhibitors of cysteine proteases of the papain family	21
1.6.1	Protein inhibitors	22
1.6.2	Low molecular mass inhibitors	24
1.6.3	Proenzymes, a special case	25
1.7	Scope and objective of the work	26

## Chapter 2: Crystallographic Studies of Ervatamin C, a Plant Cysteine Protease from *Ervatamia coronaria*

2.1	Introduction	28
2.1.1	<i>Ervatamia coronaria</i>	28
2.1.2	Ervatamins	30
2.1.3	Ervatamin C	30
2.2	Materials and methods	31
2.2.1	Crystallization	31
2.2.2	Data collection and structure solution	32
2.2.3	Model building, screening and refinement	35
2.2.4	Determination of the amino acid sequence	40
2.3	Results and discussion	41
2.3.1	Quality of the final model	41
2.3.2	The primary structure	41
2.3.3	Overall organization	43
2.4	Conclusion	46
Chapter 3: Structural Basis of the Unusual Stability and Substrate Specificity of Ervatamin C		
3.1	Stability of a protein	48
3.2	Structural basis of the stability of Ervatamin C	50
3.2.1	Intradomain interactions	51
3.2.2	Interdomain interactions	52
3.2.3	Additional factors	56
3.3	Substrate specificity of Ervatamin C – a molecular modeling study	58

3.3.1	Experimental procedure for molecular modeling of Ervatamin C	60
3.3.2	Nature of the S2 and the S3 subsites explains the altered substrate specificity of Ervatamin C	61

## PART II

### Chapter 4: Transferrins, the Iron-Binding Proteins

4.1	Introduction	71
4.2	Receptor-mediated iron uptake by transferrins	72
4.3	Sequence similarity between different transferrins	73
4.4	Structural features of transferrins	76
4.4.1	Overall organization	76
4.4.2	Ligand induced conformational change in transferrins	78
4.4.3	Dilysine trigger	79
4.4.4	Carbohydrate structure	83
4.5	pH dependent iron-binding and release in transferrins	85
4.6	Scope and objective of the work	89

### Chapter 5: Purification and Preliminary X-ray Characterization of Hen Serum Transferrin in Apo- and Holo- Forms

5.1	Purification	92
5.2	Crystallization	94
5.3	Diffraction data collection and processing	96

### Chapter 6: Crystallographic Studies on Diferric Hen Serum Transferrin

6.1	Materials and methods	101
-----	-----------------------	-----

6.1.1	Structure solution and refinement	101
6.2	Results and discussion	102
6.2.1	Quality of the final model	102
6.2.2	Molecular organization	104
6.2.3	Nature of metal and anion binding sites	108
6.2.4	Interdomain interactions	110
6.2.5	Dilysine trigger	116
6.2.6	Interlobe interactions and lobe orientation	117
6.2.7	Carbohydrate structure	120
6.3	Conclusion	121
<b>Chapter 7: Crystal Structure of Apo- Hen Serum Transferrin and Tertiary Structural Changes Associated with Iron Binding and Release</b>		
7.1	Materials and methods	123
7.1.1	Structure solution and refinement	123
7.1.2	Iron release studies and Ultraviolet-Visible spectroscopy	126
7.1.3	Circular dichroism	127
7.2	Results and discussion	127
7.2.1	Molecular organization	127
7.2.2	Relative orientation of domains	131
7.2.3	pH induced release of iron from intact hen serum transferrin	133
7.3	Conclusion	137
