

**STUDY OF THE ELECTRICAL PROPERTIES
OF METAL - INSULATOR COMPOSITES
NEAR PERCOLATION THRESHOLD**

DISSERTATION SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
OF
JADAVPUR UNIVERSITY

By
RAJKUMAR CHAKROBARTY

SAHA INSTITUTE OF NUCLEAR PHYSICS
1/AE, BIDHANNAGAR, CALCUTTA - 700 064, INDIA
1997

CONTENTS

Chapter 1	Introduction	1
1.1	Percolation Theory	4
1.2	Effective Medium Approximation	12
1.3	Literatures	15
Chapter 2	Experiment	24
2.1	Interfacing the Instruments with a Personal Computer	24
2.2	Sample Preparation and Characterisation	25
2.3	Measurement of DC I-V Characteristics	27
2.4	AC Measurements	28
2.5	Measurement of Higher Harmonics	31
Chapter 3	DC Response	34
3.1	Resistance as a Function of Concentration of Carbon	34
3.1.1	Results	34
3.1.2	Discussion	35
3.2	I-V Characteristics	38
3.2.1	Results	38
3.2.2	Discussion	43
Chapter 4	AC Response	51
4.1	A Brief Review of AC Conductivity of Random Binary Composites	52
4.1.1	R-C Model	52
4.1.2	Anomalous Diffusion Model	55
4.1.3	Comparison of Experimental Data with Theory	56

4.2	Linear AC Response of Carbon-wax Mixtures	57
4.2.1	Results	57
4.2.2	Discussion	60
4.3	Nonlinear AC Response	69
4.3.1	Results	70
4.3.2	Discussion	73
Chapter 5	Higher Harmonics	80
5.1	Results	80
5.2	Discussions	83
Chapter 6	Conclusions	92
