Summary	(x)
1 <u>INTRODUCTION AND SURVEY OF THEORETICAL AND EXPERIMENTAL WORK ON ENERGETIC ION TRAPPING</u>	1
1.1 Introduction	1
1.2 Mathematical analysis of sputtering model	2
1.2.1 Introduction	2
1.2.2 Analysis of sputtering model	3
1.2.3 Formulation based on the saturated state	8
1.3 Survey of experimental work done on ion trapping and saturation	11
1.3.1 Introduction	11
1.3.2 Trapped quantity as a function of injected dose	12
1.3.3 The sticking factor or initial trapping efficiency	13
1.3.4 Saturation values of noble gas ions in various metal targets	15
1.3.5 Energy dependence of saturation values	15
1.3.6 Distribution of trapped atoms in targets	17
1.3.7 Dependence of saturation value on intensity and temperature	21
1.3.8 Angle of ion beam incidence	21
1.3.9 Saturation in single crystals	21
1.4 Discussion and motivation for present investigation	22
2 <u>EXPERIMENTAL METHODS</u>	24
2.1 Introduction	24
2.2 Review of methods used to determine trapped quantities	25
2.3 Ion beams employed in the present experiments	27
2.4 The irradiation system	28
2.5 The current measurement	33
2.5.1 Secondary electrons	33
2.5.2 Sputtered atoms	34
2.5.3 Reflected ions	34
2.5.4 Neutral atoms in the beam	35

	Page
2.6 Mounting of the targets, temperature control and current density	35
2.6.1 Mounting and temperature control	35
2.6.2 The current density	37
2.7 Metals used and target preparation	38
2.8 Vacuum conditions	39
2.9 Determining sputtered amounts	40
2.10 Determining trapped amounts by atomic absorption	40
2.10.1 Atomic absorption	40
2.10.2 Cutting and dissolving targets	41
2.10.3 Calibration standards	44
2.10.4 Precautions against impurities	45
2.11 Determining trapped amounts by x-ray fluorescence	46
2.11.1 X-ray fluorescence analysis	46
2.11.2 Calibration	46
2.11.3 Effect of absorption	50
2.12 Testing the irradiation system	51
2.12.1 Comparison with alternative irradiation system	51
2.12.2 Testing the system by measuring trapped amounts	55
<u>METAL ION BOMBARDMENT OF METALS</u>	58
3.1 Introduction	58
3.2 Method	59
3.3 Results and discussion of sputtering	59
3.3.1 The weight loss curves	59
3.3.2 The sputtering coefficients	65
3.3.3 Comparison of sputtering coefficients with previous measurements	67
3.4 Results of trapping measurements	70
3.5 Comparison between theory and experimental results	74
3.5.1 The sticking factor	75
3.5.2 Estimating the range distribution	75
3.5.3 Correlation of trapped amounts and sputtering rates	80
3.6 Conclusion for Chapter 3	88

	Page
4 <u>BOMBARDMENT OF Cu AND Zn AT LOW TEMPERATURE WITH Ni IONS</u>	90
4.1 Introduction	90
4.2 Method	90
4.3 Results	91
4.3.1 Sputtering	91
4.3.2 Trapping	93
4.4 Correlation of saturation values and sputtering rates	93
5 <u>DISTRIBUTION OF TRAPPED Ni IN Cu AND Zn TARGETS</u>	96
5.1 Introduction	96
5.2 Method	97
5.2.1 Experimental methods of determining depth distributions	97
5.2.2 Description of technique employed	99
5.3 Results and discussion for Ni trapped in Cu targets	101
5.4 Results and discussion for Ni trapped in Zn targets	105
5.4.1 Ni implanted at room temperature	105
5.4.2 Ni implanted at 77°K	107
6 <u>DISCUSSION OF DIFFUSION</u>	109
7 <u>CONCLUSIONS</u>	116
