

STOCHASTIC RESONANCE IN VISUAL COMPUTATION

Thesis submitted for the degree of
Doctor of Philosophy (Sc.)

in
Physics

by
Ajanta Kundu

Department of Physics,
University of Calcutta
Kolkata, India
2015

Contents

1	Introduction	1
1.1	Stochastic Resonance	2
1.2	Brief History of Stochastic Resonance	4
1.3	Quantifying Stochastic Resonance	6
1.4	Stochastic Resonance in Biology	7
1.5	Stochastic Resonance in Vision	9
1.6	Why Contrast Sensitivity is Important to Study?	11
1.7	Summary	13
2	Background	16
2.1	Psychophysics: A Tool to Measure Visual Perception	17
2.2	Weber's Law and Fechner's Law	17
2.3	Components Required in Psychophysics Experiments	20
2.4	Different Methods of Psychophysics Experiments	22
2.4.1	Methods Based on Threshold Measurement	22
2.4.2	Method of Adjustment	26
2.4.3	Method of Constant Stimuli	27
2.4.4	Method of Limits	28
2.4.5	Adaptive Testing: Staircase Method	30
2.4.6	Standard Forced-Choice Method	32
2.4.7	Signal Detection Theory	33
2.5	Psychometric Function	35
2.6	Experimental setup	38

3	Stochastic Resonance in Visual Sensitivity	39
3.1	Introduction	40
3.2	Filter Function	41
3.3	Effect of Contrast Variation in a Noisy Stimulus	43
3.4	Method	45
	3.4.1 Stimulus Generation	45
	3.4.2 Numerical Estimation of Threshold Contrast	47
3.5	Stochastic Resonance of Threshold Contrast	47
3.6	Variation of Detection Sensitivity with Varying Spatial Frequency	49
3.7	Variation of Detection Sensitivity with Varying Area	49
3.8	Variation of Detection Sensitivity with Surround Mask Contrast	50
3.9	Results	52
	3.9.1 Contrast Sensitivity and Spatial Frequency	52
	3.9.2 Influence of Noise on Threshold Contrast	53
	3.9.3 Contrast Sensitivity and Area	56
	3.9.4 Contrast Sensitivity and Surround Mask Contrast	59
3.10	Discussions	60
	3.10.1 Contrast Sensitivity Obtained via SR Strongly Depends on Spatial Frequency	60
	3.10.2 Contrast Sensitivity Obtained via SR Strongly Depends on Area	62
	3.10.3 Contrast Sensitivity Obtained via SR Strongly Depends on Mask Orientation	63
	3.10.4 Filter Function	63
	3.10.5 Contrast Detection in Noise	64
	3.10.6 Additional Comments	65
4	Role of Noise in Human Visual Perception: A Psychophysical Study	66
4.1	Introduction	67
4.2	Stimuli	67
4.3	Observers	71
4.4	Procedure	71

CONTENTS

4.5	Results	73
4.5.1	Estimation of Psychometric Function	73
4.5.2	Goodness of Fit of Psychometric Function	75
4.5.3	Measurement of Contrast Detection Threshold	76
4.5.4	Measurement of Contrast Sensitivity with Varying Frequency	78
4.6	Discussions	78
4.6.1	Contrast Sensitivity Enhances via SR Through Psychophysical Experiment	79
4.6.2	Enhanced Sensitivity via SR Strongly Depends on Spatial Frequency	80
4.6.3	Frequency Content of Noisy Stimulus also exhibit SR	80
5	Noise Enhanced Orientation Perception in Human Vision	83
5.1	Introduction	84
5.2	Background	85
5.3	Stimuli	86
5.4	Observers	88
5.5	Procedure	90
5.6	Results	92
5.6.1	Measurement of ODT with Noise Strength	92
5.6.2	Comparison of minimum ODT: Oblique Effect	95
5.7	Discussions	97
5.7.1	Orientation Discrimination Sensitivity is Elevated via SR Through Psychophysical Experiment	98
5.7.2	The Elevated Sensitivity Exhibit Bias Towards Cardinal Orientations	99
5.7.3	Discrimination threshold Not Only Depends on Stimuli but Also on Tasks	100
5.7.4	Effect of Contrast and Visual Angle on ODT	101
5.7.5	Optimal Noise for SR	102
6	General Discussions	103
6.1	Threshold Paradigm of Stochastic Resonance	105
6.2	Advantages of Present Experimental Paradigm	106
6.3	Future Work	108

CONTENTS

Appendices	109
A Gray-scale Image	110
B Contrast	112
B.1 Weber Contrast	112
B.2 Michelson Contrast	113
C Contrast Sensitivity Function	114
D Center-Surround Model of Human Visual System	116
D.1 Noise and Threshold in Retina	117
D.2 Receptive Field of Retina	118
D.3 Center-Surround Model	119
D.4 Laplacian of Gaussian Model	121
E Derivation of Threshold Contrast from Threshold Crossing Rate	123
F Levenberg Marquardt Algorithm	125
G Kolmogorov-Smirnov test	127
H Deviance Residual for Psychometric Function	129
I t-test	131
I.1 Procedure	131
