

Some Theoretical Aspects of Spin Transport in Mesoscopic Systems

Thesis submitted for the degree of
Doctor of Philosophy (Science)
in
Physics

by
MOUMITA DEY
University of Calcutta

November, 2014

Contents

Abstract	iii
Words of thanks	iv
List of Publications	vi
A Few Common Symbols	xvi
List of Tables	xviii
List of Figures	xix
1 Introduction	1
1.1 Introduction to spin transport	2
1.2 Mesoscopic systems	3
1.3 Experimental realizations	4
1.4 Different nano-fabrication techniques	6
2 Landauer-Büttiker Formalism	7
2.1 Way to Landauer approach	7
2.2 Basic idea	8
2.3 Origin of voltage drop	10
2.4 Two-terminal transport	11
2.4.1 At zero temperature	11
2.4.2 At finite temperature	14
2.4.3 Linear response	16

2.5	Multi-terminal transport	17
2.5.1	At zero temperature	17
2.5.2	At finite temperature	20
2.6	Applicability of Landauer-Büttiker formalism:	22
2.7	How to evaluate the transmission function?	25
2.8	Introduction to S matrix	26
2.8.1	Definition	26
2.8.2	Properties of S matrices	27
2.8.3	Combination of S matrices	28
2.8.3.1	Coherent Combination	28
2.8.3.2	Incoherent Combination	29
2.9	Green's function	31
2.9.1	Definition:	31
2.9.2	Green's function for a single channel wire	32
2.9.3	Incorporation of a small imaginary term η	34
2.9.4	Green's function for a multi-channel wire	36
2.9.5	Eigenfunction expansion of Green's function	38
2.9.6	Relation between S matrix and Green's function	39
2.9.6.1	For single-channel lead	39
2.9.6.2	Multi-channel lead	40
2.9.7	Partitioning the Hamiltonian matrix	41
2.9.8	Alternate derivation of Green's function for a multi-channel wire	44
2.9.9	Derivation of self-energy expression for a semi-infinite multi-channel lead	46
2.9.10	Expression of self energy for single channel, and multi-channel leads in terms of tight-binding parameters	50
2.9.10.1	Single-channel TB lead	50
2.9.10.2	Multi-channel TB lead	51
2.9.11	Coupling Matrix	52
2.9.12	Evaluation of Transmission function (T_{qp})	53
2.9.13	Spectral function	54

2.9.14	Spectral function in terms of energy eigenfunctions of an open system	54
2.9.15	Density of States	57
2.10	Introduction to Transfer Matrix	57
2.10.1	Definition	57
2.10.2	Properties	58
2.10.3	Relation between elements of S matrix and T matrix	61
3	Applications of Landauer-Büttiker formalism in few quantum systems within non-interacting picture	63
3.1	Spin dependent transport through a quantum interferometer: Logical XOR gate response	63
3.1.1	Model and synopsis of the theoretical framework	64
3.1.2	Numerical results and discussion	73
3.1.2.1	Variation of conductance with magnetic flux ϕ	74
3.1.2.2	Variation of conductance with polar angle θ of the magnetic moments	77
3.1.2.3	XOR gate response	77
3.2	Magnetic Quantum Wire as a Spin Filter: An Exact Study	84
3.2.1	Model and outline of the theoretical formulation	86
3.2.2	Numerical results and discussion	90
3.2.2.1	Conductance-energy spectrum	90
3.2.2.2	Degree of spin polarization vs. energy spectrum	92
3.2.2.3	Current-voltage characteristics	93
3.3	Topological effect on spin transport in a magnetic quantum wire: Green's function approach	95
3.3.1	Model and outline of the theoretical formulation	96
3.3.2	Features of Spin Transport for Configuration 1	99
3.3.2.1	Conductance-energy characteristics	99
3.3.2.2	Variation of conductance with polar angle θ	102
3.3.2.3	Current-voltage characteristics	103

3.3.3	Features of Spin Transport for Configuration 2	104
3.3.3.1	Conductance-energy characteristics	104
3.3.3.2	Current-voltage characteristics	106
3.3.3.3	Variation of conductance with system size N	106
3.4	Magnetic-non-magnetic superlattice chain with external electric field: Spin transport and the selective switching effect	107
3.4.1	Model and Theoretical Framework	108
3.4.2	Numerical Results and Discussion	110
3.5	Magnetic field induced metal-insulator transition in a Kagome Nanoribbon	116
3.5.1	Theoretical Framework	118
3.5.1.1	Model and Hamiltonian	118
3.5.1.2	Calculation of the Peierl's phase factor	120
3.5.1.3	Evaluation of the transmission probability and current by Green's function technique	122
3.5.2	Results and discussion	122
3.5.2.1	Analytical description of energy dispersion relation in presence of magnetic field	123
3.5.2.2	Energy-flux characteristics	125
3.5.2.3	Length dependence on transmission probability	127
3.5.2.4	Conductance quantization	127
3.5.2.5	Effect of magnetic flux on transport properties	128
4	Effect of Dephasing in molecular transport	133
4.1	The model and theoretical outline	135
4.2	Numerical results and discussion	139
4.2.1	Transmittance-energy characteristics	141
4.2.1.1	Molecule coupled symmetrically	141
4.2.1.2	Molecule coupled asymmetrically	143
4.2.2	Current-voltage characteristics	144
4.2.2.1	Molecule coupled symmetrically	145

4.2.2.2	Molecule coupled asymmetrically	145
5	Effects of Spin-Orbit interaction on spin transport phenomena	149
5.1	Introduction to SO coupling in mesoscopic systems	149
5.1.1	Dresselhaus SO interaction	150
5.1.2	Rashba SO interaction	151
5.2	Spin transport through a quantum network in presence of Rashba spin-orbit interaction and Aharonov-Bohm flux	152
5.2.1	Model and theoretical formulation	154
5.2.2	Numerical results and discussion	157
5.2.2.1	Energy dispersion relation in presence of Rashba SO interaction and magnetic flux	157
5.2.2.2	Variation of conductances with AB flux	162
5.2.2.3	Conductance-energy characteristics	166
5.2.2.4	DOS-energy characteristics	168
5.2.2.5	Effect of Rashba spin-orbit interaction on localization	170
5.2.2.6	Rashba induced semi-conducting behavior	171
5.2.2.7	Spin filtering action	171
5.3	Spin-orbit interaction induced spin selective transmission through a multi-terminal mesoscopic ring	173
5.3.1	Theoretical framework	175
5.3.1.1	Model and Hamiltonian	175
5.3.1.2	A brief introduction to spin density matrix formalism	177
5.3.1.3	General expressions of P_x , P_y and P_z in terms of transmission matrices for a mesoscopic ring coupled to source and drain leads having M channels in each lead . . .	181
5.3.1.4	Evaluation of transmission matrix	182
5.3.2	Numerical results and discussion	182
5.3.2.1	Two-terminal transport	183
5.3.2.2	Three-terminal transport	185

6	Integer Quantum Hall Effect in a square lattice revisited	195
6.0.3	The model and Theoretical formulation	197
6.0.4	Numerical results and discussion	199
7	Spin Hall effect in a Kagome lattice driven by Rashba spin-orbit interaction	206
7.1	Introduction to Spin Hall Effect	206
7.2	Spin Hall Effect in Kagome lattice	207
7.3	Theoretical formulation	210
7.3.1	Model and Hamiltonian	210
7.3.2	Calculation of the Peierl's phase factor	212
7.3.3	Expressions of Longitudinal (G_L) and spin Hall conductances (G_{SH})	214
7.4	Results and discussion	216
7.4.1	Variation of spin Hall conductances with Fermi energy	216
7.4.2	Variation of longitudinal conductance with Fermi energy	219
7.4.3	Spin Hall conductance as a function of Rashba coupling strength	219
7.4.4	Effect of Magnetic field	220
7.4.4.1	Energy-flux characteristics	220
7.4.4.2	Effect of magnetic flux on spin Hall conductance	222
8	Electron transport in isolated mesoscopic rings: Persistent current and related issues	225
8.1	Introduction to persistent current	225
8.2	Magneto-transport in a mesoscopic ring with Rashba and Dresselhaus spin-orbit interactions	228
8.2.1	The Model	229
8.2.2	Determination of the DSOI	230
8.2.3	Enhancement of persistent current	235
8.3	Persistent charge and spin currents in a quantum ring using Green's function technique: Interplay between magnetic flux and spin-orbit interactions	241

8.3.1	Theoretical framework	244
8.3.1.1	Model and Hamiltonian	244
8.3.1.2	Persistent charge current	245
8.3.1.3	Persistent spin current	246
8.3.2	Numerical results and discussion	247
9	Conclusion	258
	Bibliography	263
A	Persistent current in terms of Green's function	282
A.1	Green's function approach for persistent charge current density when the ring is free from SO interactions	282
A.2	Green's function approach for persistent charge current density when the ring is subjected to Rashba and Dresselhaus SO interactions . . .	284
A.3	Green's function approach for polarized spin current density when the ring is subjected to Rashba and Dresselhaus SO interactions	286
